

This is function app

The image shows two screenshots of the Azure DevOps web interface. The top screenshot displays the 'function app' repository, and the bottom screenshot displays the 'function app-CI (1)' pipeline.

Top Screenshot: function app repository

The interface shows the 'function app' repository under the user 'abdullahmohd3047'. The left sidebar contains navigation options: Overview, Boards, Repos, Files, Commits, Pushes, Branches, Tags, Pull requests, Advanced Security, Pipelines, Test Plans, and Artifacts. The main area shows the 'function' repository with a file explorer on the left and a file list on the right.

File Explorer:

- .vscode
- Properties
- .gitignore
- Fapp.csproj
- host.json
- HttpTrigger1.cs
- README.md
- TimerTriggerCSharp1.cs

Files Table:

Introduction

TODO: Give a short introduction of your project. Let this section explain the objectives or the motivation behind this project.

Getting Started

TODO: Guide users through getting your code up and running on their own system. In this section you can talk about:

1. Installation process
2. Software dependencies

Bottom Screenshot: function app-CI (1) pipeline

The interface shows the 'function app-CI (1)' pipeline. The left sidebar contains navigation options: Overview, Boards, Repos, Pipelines, Environments, Releases, Library, Task groups, Deployment groups, Test Plans, and Artifacts. The main area shows the pipeline configuration.

Pipeline Configuration:

- Name:** function app-CI (1)
- Agent pool:** Azure Pipelines
- Agent Specification:** windows-latest
- Parameters:** This pipeline doesn't have any pipeline parameters. Create them to share the most important settings between tasks and change them in one place.

Tasks:

- Get sources:** function, main
- Agent job 1:** Run on agent
- Use .NET Core sdk:** Use .NET Core
- dotnet build:** .NET Core
- Copy Files to: \$(build.artifactstagingdirectory):** Copy files
- Publish Artifact: drop:** Publish build artifacts
